Tonight only

ClubbingNow

LIVE NIGHT

Door · Main entrance

Role	Parent · Group of 4
Band	P-1842
Wallet left	₹8,000

● Session open Dies at
close
Scan at door · bar ·
table

Cash on the floor still runs most clubs.

Door money disappears. VIP tables have no running minimum. Groups split tabs by memory. Guests will not hand over a phone number just to walk in.

01

Leakage at the door

Cover and top-ups live in a drawer. No band, no ledger, no night total until someone counts cash at 4 a.m.

02

VIP tables go dark

High-value tables have a minimum on paper. Floor never sees live spend vs bottle service until the night is over.

03

Phone friction

Apps and OTPs slow the queue. Walk-ins refuse a number. Groups still need one payer the bar can trust.

— THE SOLUTION

A band that is the ticket, the tab, and the night.

ClubbingNow loads cash at the door onto a barcode wristband. Bar and table scan the same band. Groups share one parent wallet. At close, the night dies — leftover does not carry over.

1

Band per guest — scanned in at the door

0

Phone numbers required to enter

1

Parent wallet when guests arrive together

0

Balance left tomorrow morning

— OUR USP

No guest app. No phone required.

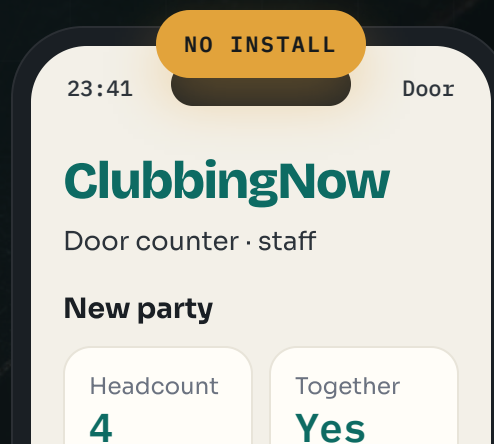

The wristband is the identity. Staff scan it. Guests drink. Phone is a receipt upgrade — never the gate.

01 Band is the pass
Barcode on every wrist. Scan at door, bar, and table.

02 Tonight only
Wallet opens at the door and dies at close. No leftover credit.

03 Group parent
Arrive together → one payer, every other band mapped to it.

04 Phone optional
Given: SMS bill. Refused: still enter, still spend, still leave.

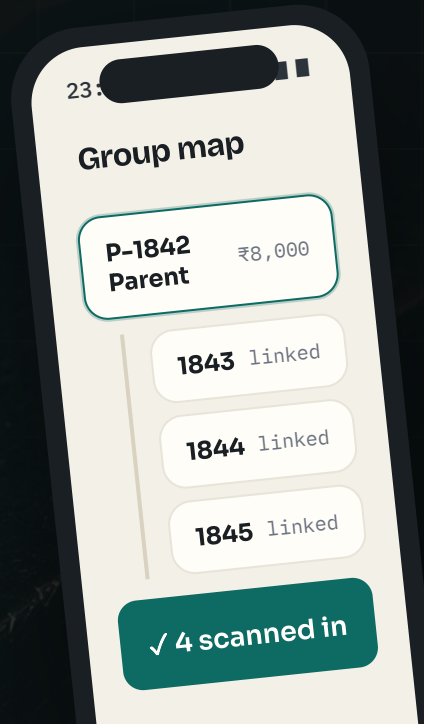

— AT THE DOOR

Everyone gets a band. Scan to enter.

Solo = one wallet. Together = pick a parent, print N bands, load once.
Every barcode is scanned in. No band, no entry.

- Headcount → together? → print bands
- One load on the parent when they arrive as a group
- Scan every barcode at the door — then they are in

Order at the counter or from the table. Same wallet.

Bartender scans the band. Waiter scans the band or the table. Any linked band spends the parent wallet. Kitchen and bar tickets accept, then deliver.

Bar counter

Scan band → pick drinks → deduct. Fast till, no cash on the wood.

Table service

Waiter tablet scans band or table QR. Ticket shows table + band.

Bar / kitchen queue

Accept → Deliver. Floor always knows what is still firing.

Linked spend

Friend's band at the bar still hits the parent wallet.

Voids & comps

Manager PIN. Full audit — who, what, which band, when.

Running total

Live remaining balance on every scan. No surprise at close.

— HIGH-VALUE TABLES

Minimum spend, live against the group.

Seat the parent (or any linked band). Floor sees free / seated / reserved / VIP. Table does not release until the minimum is met or a manager overrides — that night only.

→ Table inventory: capacity, min spend, host

→ Group wallet vs bottle service running total

→ Unmet min settled before the table is freed

One web portal for the people who run the night.

Door, bar, floor, and manager — browser staff tools. Guests never log in. Ask us for a live walkthrough.

Door

Headcount, parent map, print bands, load wallet, scan in.

Floor map

Tables live: free, seated, reserved, VIP, min spend.

Bar POS

Menu, modifiers, scan band, voids with manager PIN.

Lost band

Freeze barcode, print replacement, keep the same parent map.

Night close

Kill sessions, force-close tables, leftover to house or cash-out.

Audit & Z

Loaded vs spent vs leftover. Isolated per venue.

Everything a club night needs.

BD

Barcode bands

Every guest wears a tonight-only token. Scan is the ID.

WL

Night wallet

Cash or card at the door. Spend until close. Zero carry-over.

GP

Parent + linked group

One payer for the party. All other bands map to that wallet. Bar and table never guess who is covering.

TB

VIP tables

Min spend vs live total. Don't release until settled.

OR

Bar + table orders

Counter or waiter. Accept & deliver queue.

PH

Phone optional

Receipt if they want it. Entry never waits on OTP.

AU

Audit trail

Every load, scan, void, and close — timestamped.

Live in four steps.

Most rooms go from signup to first door load inside a week.

1

Venue

Create the club, bars, and floor map. Set night close time.

2

Staff

Door, bar, floor, manager — permissions per role.

3

Menu

Drinks, bottles, table minimums, leftover policy.

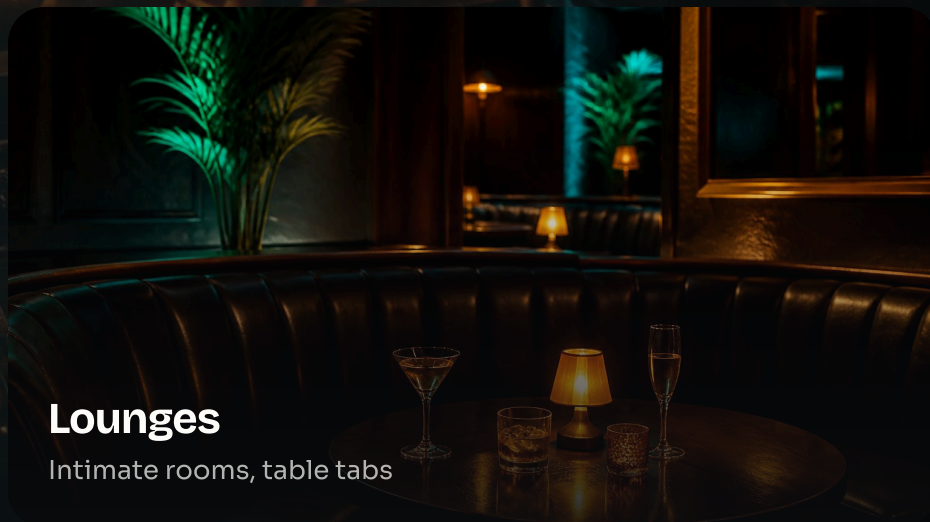

4

Open

Print bands, scan in, spend, kill the night at close.

— MARKET

Built for every room that sells a night.

— WHY CLUBBINGNOW

Designed for trust at the door.

1

Band, not an account

Guests walk in without an app or a phone number. The barcode is enough.

2

One night, then zero

No stored credit, no next-Friday claims. Leftover is a night P&L line.

3

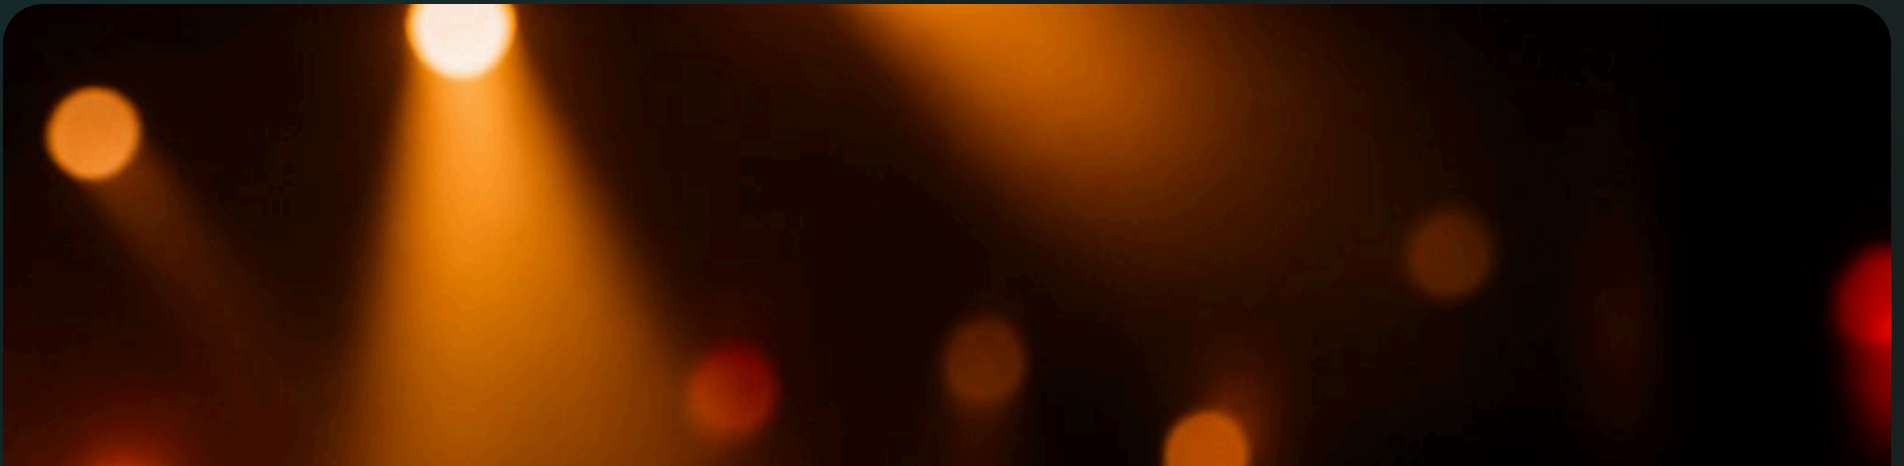

Groups stay simple

One parent wallet. Linked bands spend it at bar or table without splitting cash.

4

Floor stays in control

VIP mins, live remaining, manager voids, Z-report at close.

— LET'S TALK

Bring Clubbing Now to your door.

Tell us about the room — we'll walk door, bands, and a live night close with your team.
